

Fixed housing

TERMINAL

The fixed housing TERMINAL provides a platform for numerous applications and individual system solutions, for example:

- » Entry and exit control systems
- » Intercom systems
- » Locking systems

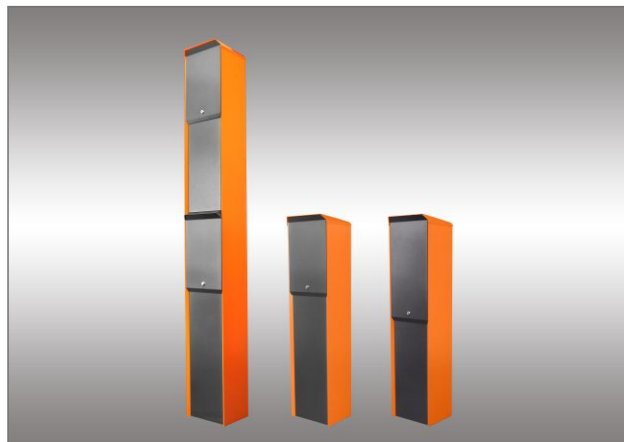

The award-winning design and ease of use of MHTM™ MicroDrive barriers has been carried over to the TERMINAL housing. It is modularly designed with housing elements made of aluminium and a base frame of powder-coated stainless steel, ensuring the best possible protection from corrosion.

The front of the housing comprises a telescopically-mounted extendable front panel and detachable door, providing optimal access for maintenance and service. The installation position and number of systems can be individually set within the front panel. For further electrical connections, you may optionally order a mounting plate which is installed inside the housing behind the detachable door.

The fixed housing TERMINAL is available in three sizes:

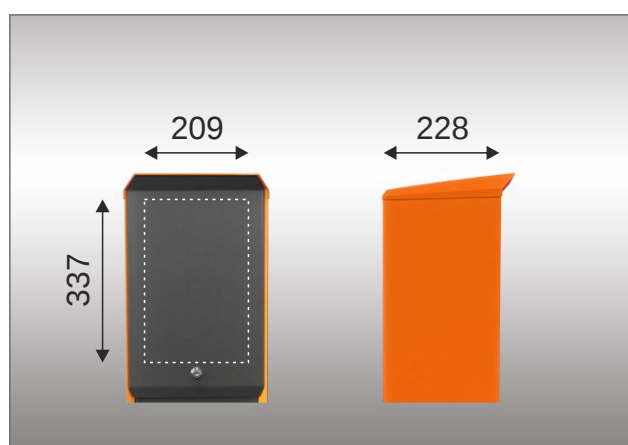

- » Car traffic:
MS and MH models, with the same overall height, differ in the height of the front panel.
- » Car/Truck traffic:
Almost twice the height, the ML model has two pull-out front panels allowing the integration of discrete access control systems for cars and trucks at corresponding vehicle heights, and two detachable doors.

There are three standard colors available: Orange (RAL 2000), White aluminum (similar to RAL 9006) and Grey aluminum (similar to RAL 9007). The TERMINAL housing can also be supplied in the full range of RAL colours at additional cost.

Technical data	TERMINAL-MS	TERMINAL-MH	TERMINAL-ML
Application	Car	Car	Car / Truck
Housing dimensions in mm (WxHxD)	296x1202x266	296x1202x266	296x2202x266
Installation dimension in mm (WxH)	209x337	209x487	209x337
Front panel design	Extendable (telescopic)		
Housing design	Powder-coated aluminum		
Base frame	Stainless steel, powder-coated		
Weight without installations in kg	15	15	27
Protection class housing	IP54		
Accessories	Mounting plate
