LE MOBILIER URBAIN

Not just sport

How can free access to sports facilities in public spaces be considered a priority compared with the reinforcement of security and the greening of cities?

The installation of gymnastic apparatus requires neither a large budget nor major work. The speed with which such apparatus can be deployed on site in all seasons may be the first sign, ideal as it is quickly visible, of the ability of municipal authorities to manage emergencies well. Beginning with the security and ecological expectations that naturally require greater planning than the installation of a few barriers and flower pots. The short-term thus places itself at the service of the medium-term, while forming part of the underlying trend of wellness and care, further heightened by the current health crisis.

This emblematic sign of a proactive policy does not merely neutralise critical impatience. It addresses us all and speaks to each one of us. Unlike stadiums and swimming pools, gymnastic apparatus are individual sports facilities. This explains the breadth of our collection, designed to satisfy the needs of all ages, sizes, builds, levels of fitness and physical exercise. Universal and easy at one point, the apparatus is customised and specialised at another. It is for us all and just for you. As we have all entered the era of the body image where sport means outdoor exercise. By its very nature.

Vincent Schaller
CEO, Sineu Graff

NOT JUST SPORT

Today's outdoor spaces are places where everything is possible, where people give free expression in increasingly open group settings. New appropriations emerge with a wish to live differently in our apartment building, workplace, district, city, territory... All are opportunities to be seized by city planners and developers.

Sineu Graff, creator of street furniture in the very heart of the city, has always strived to open up new roads and make them more comfortable. Our expertise and experiences, combined with your aspirations and ideas have driven us to create a new offer, source of wellness.

Accessible by all, Sineu Graff's Sport & Health offer is attractive, inclusive, progressive, and complete.

Mouv'roc®, Open Mouv'roc®, Space'roc® and the Satellites are solutions offering open-access facilities allowing a number of users to take exercise simultaneously and in just one place.

These Sport & Health solutions can be set up independently or be grouped in spots forming genuine focuses of vitality in our towns and villages.

Our Sport & Health solutions are compact to ensure their close vicinity to living areas. They are designed in the manner of street furniture, with sober lines simplifying their integration in all types of environment.

Their original shapes and their characteristic coverings make our solution identifiable: they become a real meeting place and requalify spaces.

Our Sport & Health solutions aim at enhancing users' well-being and quality of life. Our apparatus encourage the practice of physical activity: freely accessible and at no-cost, they are installed close to all living, work and leisure areas.

Mouv'roc®, Open Mouv'roc®, Space'roc® and the Satellites are sources of conviviality: they unite users around the practice of sport: what could be more universal or positive?

UNIVERSAL, INCLUSIVE AND INTERGENERATIONAL SOLUTIONS

The Sport & Health solutions created by Sineu Graff are adapted to each one of us: junior or senior, experts or novices, disabled or fully mobile, in good health or sick, overweight, or recovering from illness... our apparatus lets you stretch, work out, keep up or increase your strength.

Special care has been paid to the design and ergonomics of our apparatus. Each apparatus has been designed so as to offer an optimum position for each person, regardless of his morphology. The apparatus has also been devised to allow a progressive work-out. For example, the wall bars consist of a top and a bottom part. The bottom part modulates the body weight which users use to exercise. As he progresses, he changes his starting point. The wall bars are oriented so that, at all levels, the position of the body is at the right angle.

The lack of sharp edges, their diameter and their comfort rubber handles make the apparatus easy to use.

Mouvroc®, Open Mouv'roc®, Space'roc® and the Satellites offer a wide range of activities and an unparalleled comfort of use: they are designed as universal, inclusive and intergenerational solutions.

EXERCISE IN COMPLETE SAFETY

Mouvroc®, Open Mouv'roc®, Space'roc® and the Satellites were designed to comply with the requirements of European standard NF EN 16630, specifying the general safety requirements relating to manufacturing, installation, inspection and maintenance of freely accessible, open-air, fixed fitness modules.

The Mouvroc®, Open Mouv'roc®, Space'roc® apparatus are fixed - users exercise without the risk of losing their balance or getting stuck. The Mouvroc®, Open Mouv'roc®, Space'roc® apparatus carry no weights: the exercises are performed with all or part of the users' body weight.

MOUV'ROC®

Not just sport

Mouv'Roc®, an acknowledged and highly acclaimed solution that, thanks to the consideration of all citizens in its planning, guarantees a lasting investment in wellness.

MOUV'ROC®

Not just sport

Its strengths

A connected solution

Sineu Graff and Gomouv' have developed a dedicated website that can be accessed from a smartphone for free, without downloading, without subscription or prior registration.

Users have access to many exercises that can be sorted according to the gender or the category (woman, man, senior etc...) or the type of activity (warming up, strengthening or stretching) or

Clear instructions

Near each apparatus, a panel presents the exercises and stretching works, muscle development or of recovery.

The exercises illustrated by figures in action mention the accessibility levels, the positions to be adopted, the sequences to be performed and how to breathe.

Find all MOUV'ROC® in Europe on this map !

depending on the muscle group to work on in priority and the difficulty level.

The exercises are regularly updated and new ones added to this website.

By scanning the unique QR-Code printed on each sign, the user is redirected to the large number of exercises. Always by sticking to an adapted and progressive practice.

Self-powered lighting

Controlled by a timed piezo switch at 15 minutes, the LED lighting equipment, will allow a prolonged use of Mouv'Roc® (optional).

Powered independently by a solar panel installed on the roof, the device does not need to be connected to the electricity network.

Smartphones charge

The USB connection (optional) charges smartphones and tablets (charge control switch timed to 15 minutes) allows the user to stay connected during his practice.

The vandal-proof USB module is made of powder-coated cast aluminium.
