

FACTSHEET

BIKE PARK CONTROL

“BikeParkControl” is a initiative of Klaver, G4S & Nsecure. This initiative is awarded and consists a total concept in maintaining the capacity of bicycle parking in railway station area. The concept is providing in bicycle stand, registration, information (statistics) and operational reports and the service in removing and storage of bicycles which are overdue in parking. The concept is considered new and is build on assembling proven technology to a whole new functional concept which supports local authorities as well the cyclist in optimal use of bikestands.

By using a bicycle rack with BikeParkControl, several modules can be chosen to support you in:

- Reducing considered orphan bikes
- Signage system (like with cars, where signs show you where spots are left to park)
- Capacity planning
- Control over large bicycle storage areas
- Blocking of bicycles parked over time.
- Information per SMS, PDA, internet, terminal etc.
- Payment system per timeframe.

HOW DOES IT WORK?

The basis is in the detection of how long a bicycle is being parked. With this information the whole process can be controlled. For the reduction of the increasing number of considered orphan bikes it is important to know where and how long a bicycle has been parked. This will make sure that parked bicycles which shouldn't be in place anymore are removed quickly and with sound proof on paper.

Another module makes it possible to find a free spot in very large storages, making sure that the maximum capacity

is being used. Management information supplies data about the number of places occupied, average parking time, differences between periods etc.

Other modules take care of blocking a bicycle when it is being parked to long. Bicycles can than for example be released by making use of a cellphone payment. This system can also be used for renting popular parking spots in busy city or station areas.

BikeParkControl is flexible and modular and can be adjusted to the specific needs for your situation; orphan bikes, signage system, management information, the choice is up to you!

BikeParkControl, the modular, total solution for controlling bicycle parking!
